

PRESS RELEASE

## Hotsip Successfully Completes OMA Interoperability Testing

**Hotsip has successfully participated in the OMA interoperability event to test the coming product release of presence and XCAP.**

**Stockholm, Sweden – December 15, 2005** - Hotsip AB ([www.hotsip.com](http://www.hotsip.com)), a leading SIP Application Server provider and a member of Open Mobile Alliance (OMA), announced today the successful participation in OMA TestFest with Hotsip's presence and XCAP server. The testing took place at the OMA TestFest in Dusseldorf, Germany between November 8 and 15.

At the OMA TestFest member companies can bring their implementation for testing in multiple cross-vendor combinations to give members the opportunity to contribute to interoperability. Hotsip participated with their presence and XCAP server that will be commercially available in February 2006.

"It was important for us to do early interoperability testing of our presence and XCAP server to avoid any delays and costs in the new coming release. The OMA TestFest happened just at the right point in time" says Johan Liseborn, CTO of Hotsip. He continues: "Based on standards from OMA we will be able to provide future-proof presence enabled media and media-rich communication services for mobile and IMS (IP Multimedia Subsystem) networks".

"OMA are always pleased to see members of the alliance bring their new products to the TestFests", said Howard Greenwell, director of interoperability programs at OMA. "It is the commitment of the members to ensure the interoperability of their products before they are released to market that helps everyone experience a better product and a larger market".

### **About Hotsip**

Hotsip is a leading SIP/J2EE Application Server provider for large scale broadband and 3G/IMS networks. Hotsip's business idea is to increase value by providing new revenue opportunities for its customers through a rich offering of convergent applications. Among Hotsip's customers are: TeliaSonera, Telenor, Ericsson, HP and Nokia. See <http://www.hotsip.com>

### **About the Open Mobile Alliance (OMA)**

The Open Mobile Alliance (OMA) delivers open specifications for the mobile industry, helping to create interoperable services that work across countries, operators and mobile terminals and are driven by users' needs. To expand the mobile market, companies supporting the Open Mobile Alliance work to stimulate adoption of a variety of new, enhanced mobile information, communication and entertainment services. The Open Mobile Alliance includes contributors from all key elements of the wireless value chain, and contributes to the timely and efficient introduction of services and applications.
