

## **Neural Technologies wins European IT Excellence Award**

February 2011

Neural Technologies was presented with a European IT Excellence Award at a gala dinner at the London Marriott on 10th February. The award was in the ISV category of 'Enterprise Application' and recognised a joint fraud and credit risk management project with Turkish mobile operator, Turkcell.

This is the first time that Neural Technologies has entered this competition, which received entries from thirty one countries across Europe.

The European IT Excellence Awards recognise the crucial role that independent software vendors (ISVs) play in the delivery of real world solutions. The Enterprise Application award category is designed to enable ISVs to showcase how they have developed and deployed innovative enterprise applications that make their customers more responsive and competitive.

On winning the award Turkcell commented, "We were very happy to hear of this good news. I congratulate all the team for a successful outcome".

John Gavan, CEO of Neural Technologies, said "I am delighted at winning the highly prestigious European IT Excellence Award. May I offer my congratulations to all within Neural Technologies and Turkcell who worked so hard to achieve this very impressive distinction. The judges recorded that we 'really are the cream of a very skilled industry'".

### **About IT Europa & the European Excellence Awards**

IT Europa is the leading provider of strategic business intelligence, news and analysis on the European IT marketplace and the primary channels that serve it. The IT Europa European Awards recognise best practice in customer solutions by IT channels across Europe and encourage channel partnership and relationships across IT, convergence and Internet industries.
