Nationwide Managed WAN Provider packetPointe Selects Sylantro to Deliver Network-Hosted VoIP Solutions

Sylantro Platform Allows packetPointe to Leverage Existing Network and Service Offerings to Serve Installed Base Consisting of Thousands of Customer Locations Nationwide with Advanced Voice Services

CAMPBELL, Calif., August 30, 2005 – Sylantro Systems Corporation today announced that packetPointe Communications, Inc. has deployed the award-winning Sylantro applications feature server to power its new phusionPointe hosted Voice over IP (VoIP) and IP Centrex services. Through the Sylantro platform, packetPointe has expanded its fully secured, managed private Wide Area Network (WAN) and virtual private network (VPN) services to deliver a complete bundle of advanced voice and data services to customers throughout North America.

With more than 15 years of experience in delivering voice and data services, packetPointe specializes in providing a single-vendor solution that is transparent across multiple WAN technologies and networks. By integrating point-of-sale devices, ATMs, fuel controllers, and other critical retail systems into a customer's WAN environments, packetPointe can guarantee delivery of broadband products, voice communications, and managed network services via terrestrial and private satellite technologies. packetPointe will leverage its phusionPointe VoIP services to expand beyond its current customer base of fuel retailers, restaurants and general retail operations to address mainstream small to medium-sized businesses and enterprise accounts. In addition to the company's new business IP Centrex offering, a consumer-oriented

phusionPointe VoIP service — with full 911/E911 support — will be delivered simultaneously via the Sylanro platform.

“We’ve built a thriving business by addressing the needs of customers with geographically dispersed locations, often in remote areas that do not have ready access to broadband services,” said Brad Anderson, vice president of packetPointe Communications. “Through the Sylanro applications feature server, we can now add hosted VoIP and hosted IP Centrex services to our network, allowing us to offer a full suite of advanced communications services to both business and consumer users. This will complement and further enhance our service portfolio, allowing us to address new markets on a nationwide scale.”

The Sylanro solution set is deployed in packetPointe’s wholly owned carrier-class network operation center and state-of-the-art data center located in Salt Lake City, Utah. The company delivers a complete, integrated suite of solutions including end-to-end managed WAN solutions, high-speed credit processing connectivity (through a credit LAN connection to the major credit providers), back-office integration and a number of other services geared to multi-location retail vendors.

“packetPointe has built a strong and growing business by serving as a single point of contact for their customers’ mission-critical communications needs, and by uniting diverse technologies to deliver targeted, tailored business solutions,” said Bernard Gutnick, vice president of product marketing for Sylanro Systems. “Sylanro’s industry-leading integrated communications applications complement and expand upon packetPointe’s service offerings, providing compelling new services for existing customers and allowing packetPointe to address new markets on a nationwide scale.”

About packetPointe Communications

packetPointe Communications, Inc. (packetPointe) is a leading single solutions provider of converged voice and data networks. packetPointe provides business customers with a one stop shop for enterprise or business grade, managed broadband connectivity, Hosted IP PBX solutions and Voice over Internet Protocol (VoIP) telephony services. In addition, packetPointe offers regional and national multi-site retail operators with end-to-end, fully managed voice and data network services that guarantee 100% nationwide coverage. packetPointe is based in Salt Lake City, Utah and provides its products and services to customers throughout the continental United States and Canada. With customer deployments in nearly all 48 lower states packetPointe centrally manages its services from a company owned state-of-the-art data center and world class network operations center. About Sylanro Systems Corp.

Sylanro Systems provides the premier software platform for advanced IP Centrex and hosted communications services for business, residential, wireless and other applications. The company leads the market in deployments, with carriers such as SBC, PTTs such as Swisscom, and next-generation service providers such as NuVox and Covad using the Sylanro platform. With a unique combination of advanced applications, a carrier-class platform, and proven go-to-market services, Sylanro allows service providers to rapidly deliver high-value, high-margin managed telephony services. These award-winning solutions offer business users sophisticated communications services without the cost and complexity of today's in-house PBX and key systems, and give consumers new flexibility in their communications services. Sylanro is a privately held company backed by premier investors. On the Web: www.sylanro.com
