Maxcom Telecomunicaciones Deploys Sylantro-Based Hosted Business VoIP Services in Mexico

*Mexico's First CLEC Now Delivers First Network-Hosted IP-PBX Replacement Services
for Businesses*

CAMPBELL, Calif., July 25, 2005 – Sylantro Systems Corporation today announced that Maxcom Telecomunicaciones has deployed Sylantro's applications feature server to power the new Maxcom GENUS Voice System for businesses throughout the company's service area. The GENUS Voice System gives business users hosted IP PBX-type capabilities as well as advanced features that improve employee productivity and collaboration while reducing capital and operational expenses.

With more than 1000 employees, Maxcom Telecomunicaciones serves in excess of 200,000 business and residential lines via copper, fiber-optic and microwave networks. The company was the first competitive local exchange carrier (CLEC) to deploy commercial services in Mexico. The GENUS Voice System will be offered initially to business customers in Mexico's largest metropolitan areas including Mexico City, Puebla, Queretaro, Toluca, Guadalajara, Monterrey, Leon, San Luis Potosi and Aguascalientes.

"The Sylantro applications feature server allows us to offer businesses a complete suite of high-end features and capabilities in a network-hosted model that eliminates the need for a costly on-premise PBX," said Juan Pablo del Real, director of new technologies and strategic sales of Maxcom Telecomunicaciones. "Further, the GENUS Voice System democratizes these

advanced IP technologies, allowing businesses of almost any size to take advantage of state-of-the-art communications services to achieve greater efficiency and productivity.”

Maxcom commenced commercial operation in 1999 and has been a consistent leader in providing advanced telecommunications options for its business and residential customers. The GENUS Voice System includes fully localized user and administrator portals, integration with Microsoft® Outlook® messaging and collaboration clients, and mobile phone integration via Wireless Access Protocol (WAP). Maxcom has also deployed advanced features such as find me/follow me, customizable call treatments, call logs and many others.

“Maxcom exemplifies the new wave of service providers who are embracing hosted IP communications services on a worldwide basis,” said Pete Bonee, president and CEO of Sylanro Systems. “Through Sylanro’s applications feature server and business VoIP applications, Maxcom can now offer new compelling IP communication services that address the needs of existing customers and attract new customers as well.”

About Maxcom Telecomunicaciones

Maxcom Telecomunicaciones, S.A. de C.V., headquartered in Mexico City, Mexico, is a facilities-based telecommunications provider using a “smart-build” approach to deliver last-mile connectivity to micro, small and medium-sized businesses and residential customers in the Mexican territory. Maxcom launched commercial operations in May 1999 and is currently offering Local, Long Distance and Internet & Data services in greater metropolitan Mexico City, Puebla, Queretaro, and recently Monterrey and Guadalajara. The information contained in this press release is the exclusive responsibility of Maxcom Telecomunicaciones, S.A. de C.V. and has not been reviewed by the National Banking and Securities Commission of Mexico (CNBV). About Sylanro Systems Corp.

Sylanro Systems provides the premier software platform for advanced IP Centrex and hosted communications services for business, residential, wireless and other applications. The company leads the market in deployments, with carriers such as SBC, PTTs such as Swisscom, and next-generation service providers such as NuVox and Covad using the Sylanro platform. With a unique combination of advanced applications, a carrier-class platform, and proven go-to-market services, Sylanro allows service providers to rapidly deliver high-value, high-margin managed telephony services. These award-winning solutions offer business users sophisticated communications services without the cost and complexity of today’s in-house PBX and key systems, and give consumers new flexibility in their communications services. Sylanro is a privately held company backed by premier investors. On the Web: www.sylanro.com
